THE ROAD TO NET ZERO ENERGY BUILDINGS AND TITLE 24 ENERGY UPDATE

The California Energy Commission has set a goal that all new residential construction projects built after 2020 shall be built Net Zero. This means the building will produce as much energy as the building consume. With each code cycle the State of California has been increasing energy performance of residential buildings in order to get closer to Net Zero.

Learn:

- What is a Net Zero building and how is it defined/measured,
- What Title 24 changes are in place for this code cycle
- How is energy modeling, HERS measures and/or building commissioning used to achieve Net Zero.
